

Integrating Quicktome at your INSTITUTION

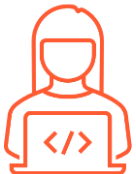

Who are we?

**An innovative medical AI company
founded by neurosurgeons**

**A scientific organization with over
+30 papers on brain network
mapping and neuroimaging alone**

**A team of cloud-based
engineering and security veterans**

What is Quicktome?

Neurosurgical planning in the digital era.

- Allows surgeons to visualize **brain networks** prior to surgery.
- *Insights*, not just information with fast and intuitive workflow and minimal training.

Secure web infrastructure with
no PHI stored outside of hospital

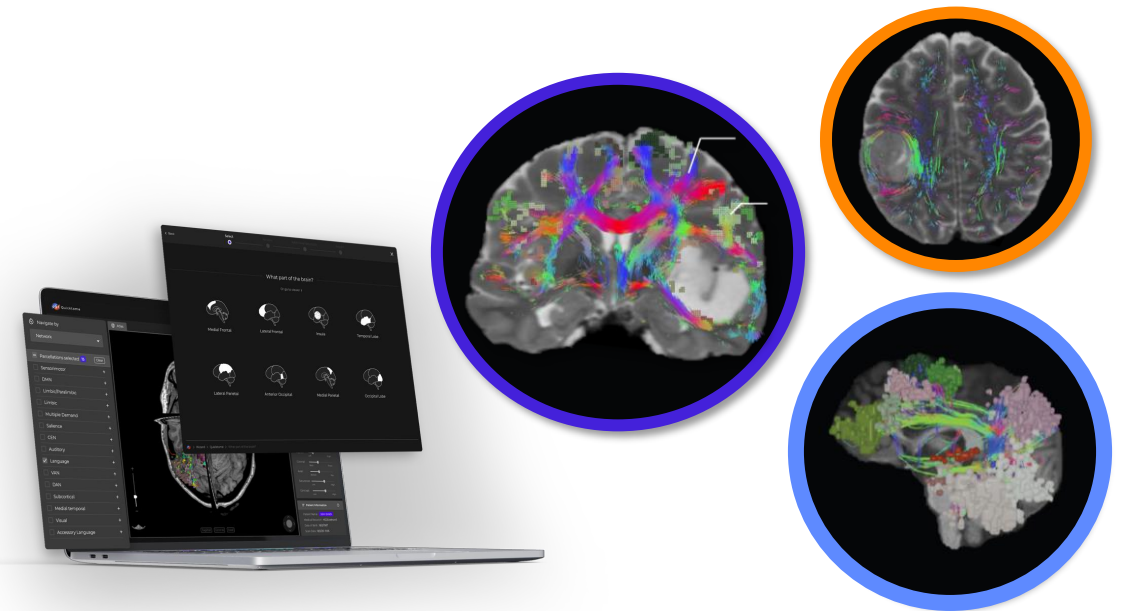

No disruption to existing workflows

No upfront capital purchase

Quicktome was **designed by neurosurgeons** to quickly and simply back each incision with detailed knowledge of the brain's networks – **built specific to each patient**

Next-gen imaging algorithms

Reduce surgical uncertainty with **CSD-based tractography** and **automatic edema correction**.

More value from your capital

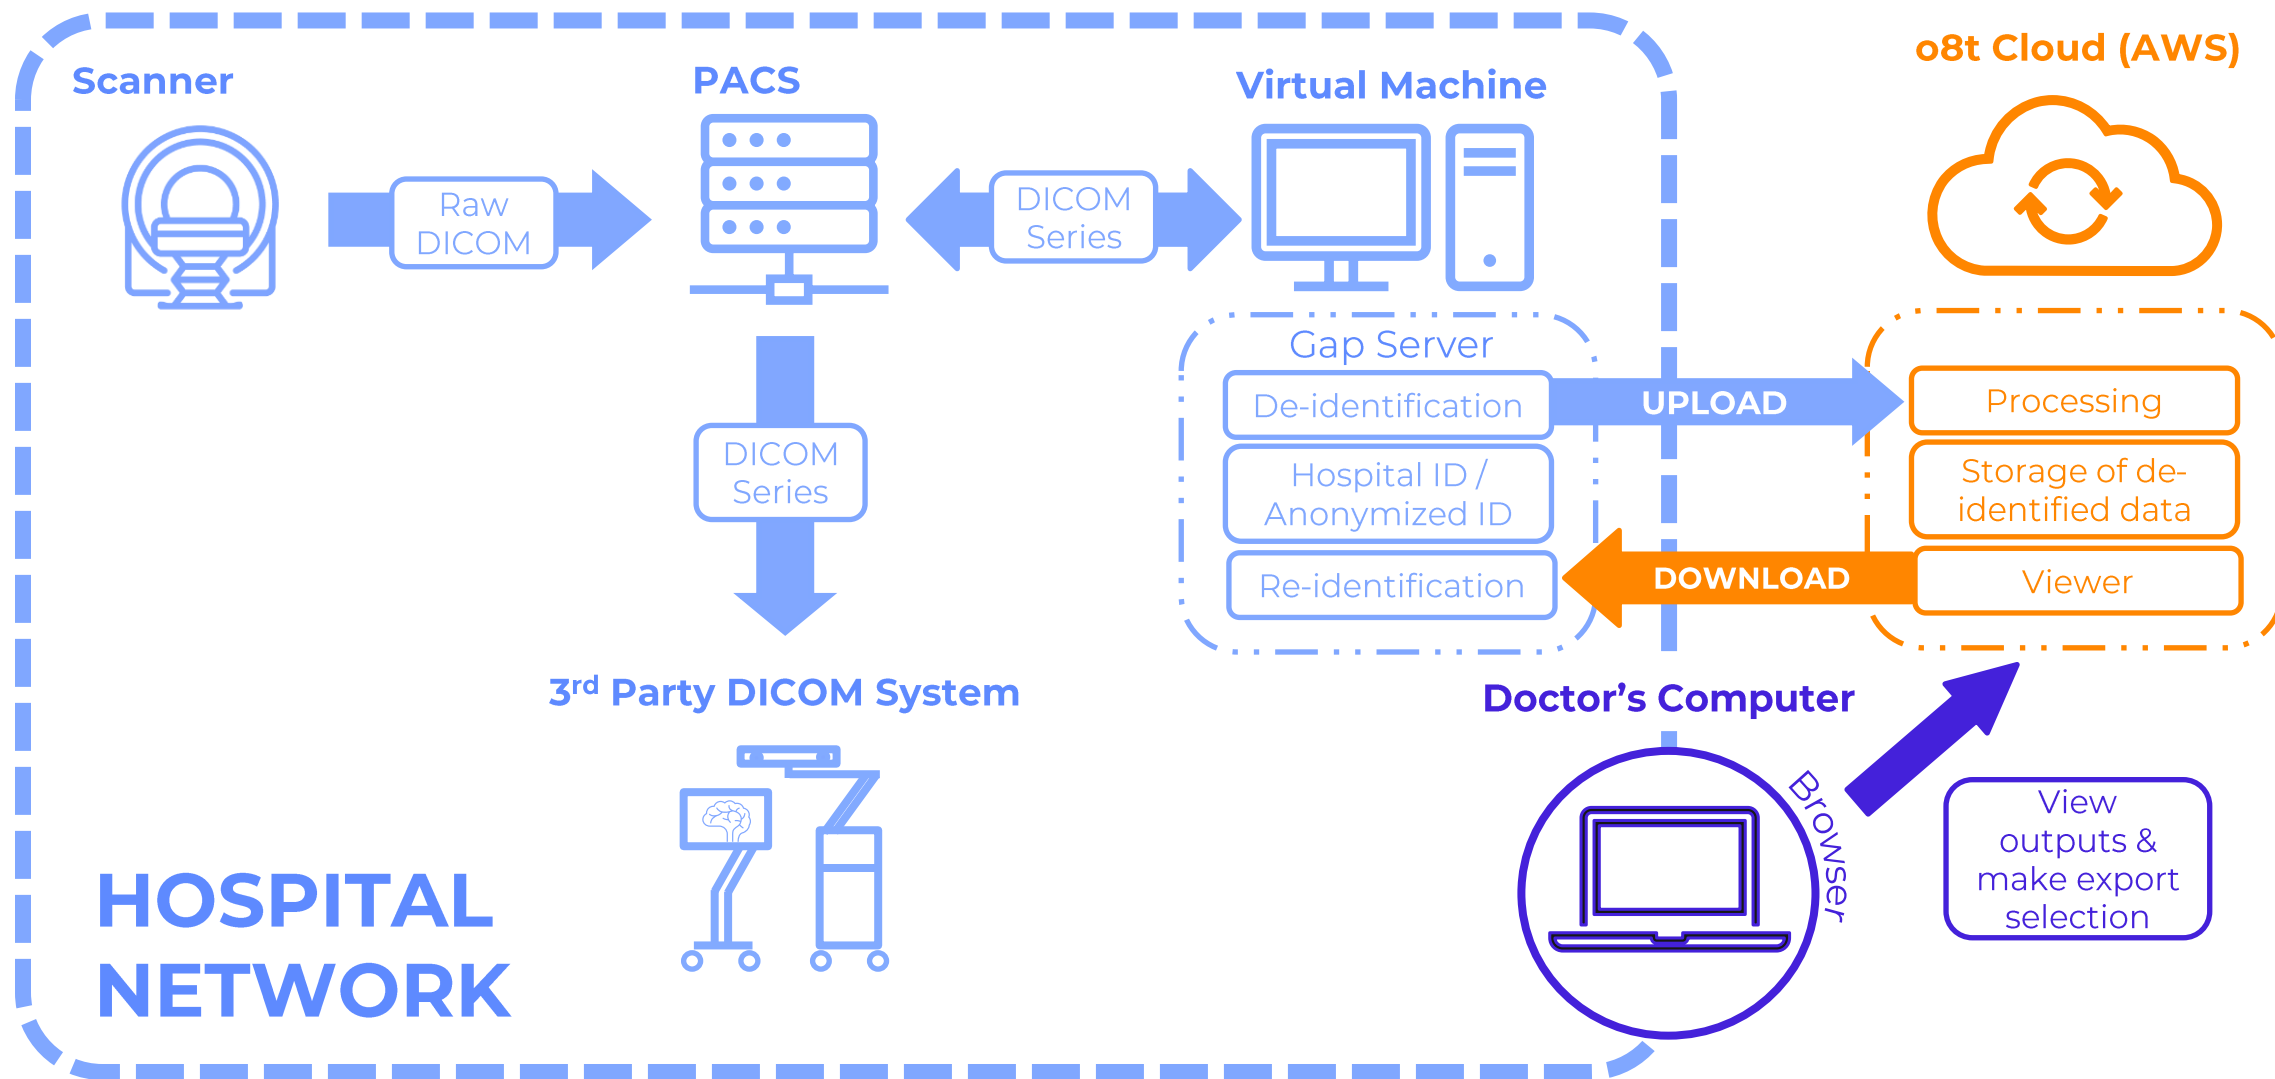

Designed to work with existing scanners. Multi-directional DWI's are used to **minimize scan time**

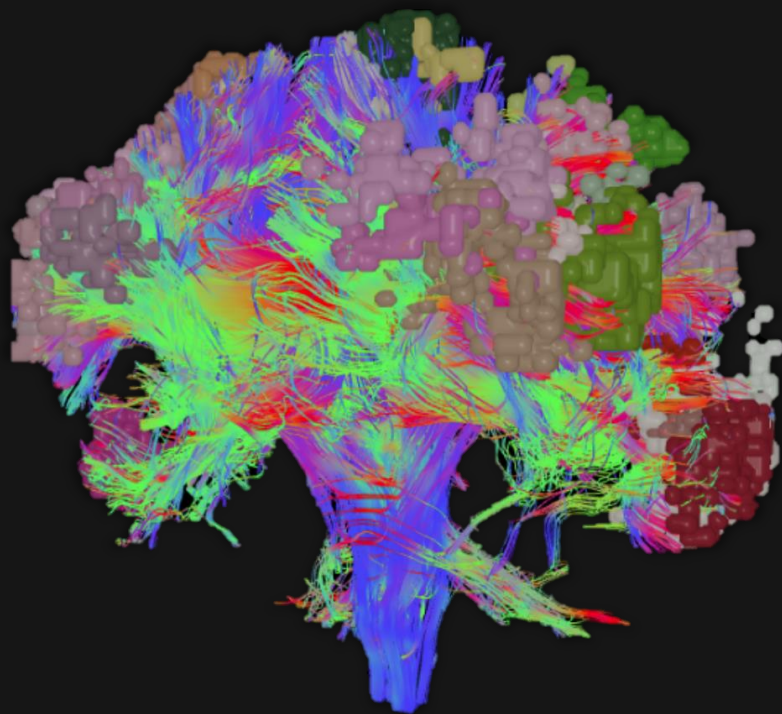

Cloud-based workflow

All processing is automated in the cloud for **consistent outputs** every case with **no manual tuning required**.

Quicktome System Overview

No data is more personal than an individual's brain...

Omniscient understands the importance of careful and active stewardship of Hospital and Patient Health information.

Together, we can provide a secured design, defence-in-depth and least privilege access, secured strategy to protect your Patient's data.
