

Press Release

Company Statement Regarding Dr. Charles Teo

April 18, 2023. Atlanta, Georgia: [Omniscient](#) (“the Company”) is a world leader in using artificial intelligence to decode the human brain, a field known as [connectomics](#). Our mission is to build brain A.I. technology which improves the lives of billions.

The Company is aware of recent medical practice hearings in Australia involving Dr. Charles Teo in his role as an Australian-based neurosurgeon and wishes to clarify Dr. Teo’s history with the organization.

Dr. Teo was one of five co-founders of Omniscient in 2019. His early advocacy in the field of connectomics helped establish an initial working group which led to the formation of the Company.

Beyond this, however, Dr. Teo has never served as an employee of Omniscient nor has he participated actively in the shaping of its strategy or products. While briefly a member of the board of directors, Dr. Teo resigned his seat in 2021 where his formal involvement in the Company ceased.

It is important to note that the current Australian hearings involving Dr. Teo pertain to Australian clinicians and their professionalism in the practice of medicine. They have no connection to Omniscient or its technology.

Omniscient Chairman, Mr. Daniel Appleby, said: “Omniscient continues to work with an expanding array of leading experts around the world – in artificial intelligence, neuroscience, neurology, neurosurgery & mental health – to advance the field of connectomics, and we are blessed to have the continuing financial support of our visionary investors. Our growing footprint at the pinnacle of brain science in the United States & elsewhere is testament to the power of A.I. to advance the field and, most importantly, to improve outcomes for patients & improve life for billions.”

Commenting on Dr. Teo, he added: “Omniscient’s Board of Directors greatly appreciate Dr. Teo’s early advocacy for the field of connectomics. However, Dr. Teo plays no role in the operations, management, or governance of the Company.”

About Omniscient

Omniscient (o8t™) is an A.I. company focused on the human brain, and a world leader in the field of [connectomics](#). It is led by a team of physicians, data scientists & technology experts who are building A.I. tools to help science better understand, treat & prevent brain health conditions. The Company uses its revolutionary platform to find biomarkers, create diagnostic tools, refine therapeutic targeting & track disease progression. The Company’s first product, [Quicktome™](#), [received US FDA clearance in 2021](#), and has been cleared for medical use in over a dozen countries around the world. Omniscient is poised to change the future of neuroscience and make connectomic brain-mapping technology accessible to all. To learn more, visit [o8t.com](#).
